Computer Science

CS 1101 Programming Fundamentals

UNIVERSITY
OF THE PEOPLE
The Education Revolution

CS 1101: Programming Fundamentals

Credits: 3

Prerequisites: None

Course Description

This course covers the basics of computer programming and provides a foundation for further learning in this area. No previous computer programming knowledge is required to finish this course. The course uses the Python programming language which is very simple and straightforward. The course also covers abstract concepts which can be applied to almost any programming language, and students are encouraged to pay attention to these, since the way of thinking like a programmer is the most valuable lesson they will learn.

Required Textbook and Materials

UoPeople courses use open educational resources (OER) and other materials specifically donated to the University with free permissions for educational use. Therefore, students are not required to purchase any textbooks or sign up for any websites that have a cost associated with them. The main required textbooks for this course are listed below, and can be readily accessed using the provided links. There may be additional required/recommended readings, supplemental materials, or other resources and websites necessary for lessons; these will be provided for you in the course's General Information and Forums area, and throughout the term via the weekly course Unit areas and the Learning Guides.

Textbook

Downey, A. (2015). [Think Python: How to think like a computer scientist. \[PDF\]](#).

Software Requirements/Installation

For your assignments, you must download and install the appropriate Python interpreter for your computer and operating system. Versions of the software are available for Windows (XP, Vista, Windows7), Linux distributions, and Mac OS. Most popular distributions of Linux will either include Python or will provide an installation option for it in the software management utility.

You can find available downloads for Python v3 at the following URL: Python software Foundation. (2019). Download Python. <http://www.python.org/download/>

Installation is relatively straightforward. Follow the prompts when installing. Further information is available in the documentation section located here: Python Software Foundation. (2020). Python 3.8.1 documentation. <https://docs.python.org/3/>.

NOTE: Instructions to install and configure Python can be found in the Python setup and usage section of this page.

Additional Resources

WisdomJobs. (2018). [IDLE - Python](#).

Pythonanywhere. (n.d.). Host, run, and code Python in the cloud. <https://www.pythonanywhere.com/>

NOTE: The PythonAnywhere website above is a good alternative for Python programming. You can get a free account with just your email address. Please make sure that you use Python 3.x (not 2.x).

Learning Objectives and Outcomes

By the end of this course students will be able to:

1. Implement code using fundamental programming concepts, language constructs and procedural programming approaches.
2. Develop programs using the Python programming language to solve programming problems.
3. Independently research programming languages and apply new programming language features.

Course Schedule and Topics

This course will cover the following topics in eight learning sessions, with one Unit per week. The Final Exam will take place during Week/Unit 9 (UoPeople time).

Course Schedule and Topics

Week	Unit	Topic
1	1	Introduction and Fundamental Concepts
2	2	Variables, Expressions, Statements, and Functions
3	3	Conditionals and Recursion
4	4	Functions and Return Values
5	5	Iteration and Strings
6	6	Lists
7	7	Dictionaries and Tuples
8	8	Files
9	9	Course Review and Final Exam

Learning Guide

The following is an outline of how this course will be conducted, with suggested best practices for students.

Unit 1: Introduction and Fundamental Concepts

- Read through the Learning Guide and the Reading Assignment.
- Download and install a working Python 3 environment (not required for PythonAnywhere users). Refer to the Software Requirements/Installation section of the Syllabus.
- Participate in the Discussion Assignment (post and comment in the Discussion Forum)
- Complete and submit the Programming Assignment.
- Take the Self-Quiz.

Unit 2: Variables, Expressions, Statements, and Functions

- Read through the Learning Guide and the Reading Assignment.
- Complete the Discussion Assignment by posting in the Discussion Forum.
- Respond to three of your fellow classmates' posts in the Discussion Forum.
- Complete and submit the Programming Assignment.
- Take the Self-Quiz.

Unit 3: Conditionals and Recursion

- Read through the Learning Guide and the Reading Assignment.
- Participate in the Discussion Assignment (post and comment in the Discussion Forum)
- Complete and submit the Programming Assignment.
- Take the Self-Quiz.
- Take the Graded Quiz.

Unit 4: Functions and Return Values

- Read through the Learning Guide and the Reading Assignment.
- Participate in the Discussion Assignment (post and comment in the Discussion Forum)
- Complete and submit the Programming Assignment.
- Take the Self-Quiz.

Unit 5: Iteration and Strings

- Read through the Learning Guide and the Reading Assignment.
- Participate in the Discussion Assignment (post, comment, and rate in the Discussion Forum)
- Complete and submit the Programming Assignment.
- Take the Self-Quiz.

Unit 6: Lists

- Read through the Learning Guide and the Reading Assignment.
- Participate in the Discussion Assignment (post, comment, and rate in the Discussion Forum)
- Complete and submit the Programming Assignment.
- Take the Self-Quiz.
- Take the Graded Quiz.

Unit 7: Dictionaries and Tuples

- Read through the Learning Guide and the Reading Assignment.
- Participate in the Discussion Assignment (post, comment, and rate in the Discussion Forum)
- Complete and submit the Programming Assignment.
- Take the Self-Quiz.

Unit 8: Files

- Read the Learning Guide and Reading Assignments
- Participate in the Discussion Assignment (post, comment, and rate in the Discussion Forum)
- Complete and submit the Programming Assignment.
- Read the Unit 9 Learning Guide carefully for instructions on the Final Exam.
- Take the Self-Quiz.
- Take the Review Quiz.
- Complete and submit the anonymous Course Evaluation.

Unit 9: Course Review and Final Exam

- Read the Learning Guide and take the Review Quiz, if you haven't already done so.
- Prepare for, take, and submit the Final Exam
- The Final Exam will take place during the Thursday and Sunday of Week/Unit 9 (UoPeople time); exact dates, times, and other details will be provided accordingly by your instructor.

Course Requirements**Programming Assignments**

You have to complete a programming assignment in each unit. For each programming assignment, you must develop the required program and submit by the required due date. Your submission must include the code of your program and description of the results obtained when running the program. You are required to submit your assignments by the indicated deadlines. *These assignments will be graded by your instructor.*

Discussion Assignments & Response Posts/Ratings

Some units in this course require that you complete a Discussion Assignment. You are required to develop and post a substantive response to the Discussion Assignment in the Discussion Forum. A substantive response is one that fully answers the question that has been posted by the instructor. In addition, you must extend the discussion by responding to at least three (3) of your peers' postings in the Discussion Forum.

In Unit 1 through Unit 4, your discussion posts will be assessed by your instructor. In Units 5 to 8, you will assess three of your peers' discussion posts. Instructions for proper posting and rating (out of a 10-point scale) are provided inside the Discussion Forum for each week. Discussion Forums are only active for each current and relevant learning week, so it is not possible to contribute to the forum once the learning week has come to an end. Failure to participate in the Discussion Assignment by posting in the Discussion Forum and responding to peers as required may result in failure of the course.

Quizzes

This course will contain three types of quizzes – the Self-Quiz, the Graded Quiz, and the Review Quiz. These quizzes may contain multiple choice, true/false, or short answer questions. The results of the Self-Quiz will not count towards your final grade. However, it is highly recommended that you complete the Self-Quiz to ensure that you have adequately understood the course materials. Along with the Reading Assignments, the results of the Self-Quiz should be used as part of an iterative learning process, to thoroughly cover and test your understanding of course material. You should use the results of your Self-Quiz as a guide to go back and review relevant sections of the Reading Assignments. Likewise, the Review Quiz will not count towards your final grade; however, they can be used to assist you in a comprehensive review and full understanding of all course material, in preparation for your Final Exam. Lastly, the results of the Graded Quiz will count towards your final grade.

Final Exam

The Final Exam will take place during the Thursday and Sunday of Week/Unit 9, following the completion of eight units of work. The format of the Final Exam is similar to that of the quizzes and may contain a combination of different question types. You will have one attempt to take the exam, and it will be graded electronically. Specific instructions on how to prepare for and take the exam will be provided during Week/Unit 8.

Course Forum

The Course Forum is the place to raise issues and questions relating to the course. It is regularly monitored by the instructors and is a good place to meet fellow students taking the same course. While it is not required to participate in the Course Forum, it is highly recommended.

Assignment Submission

Please note that accepted formats for assignments are Microsoft compatible format, PDF, or any other file format that is clearly specified in the course and activity instructions. These files should not be password-protected. Additionally, unless otherwise stated in assignment instructions, screenshots of computer coding, mathematical formulas or images with sentence structures (typed or in handwriting) are not allowed when you submit your assignments in this course.

Course Policies

Grading Components and Weights

Each graded component of the course will contribute some percentage to the final grading scale, as indicated here:

Grade Components

Course Requirements	Number of Items	Percentage
Discussion Forum Units 1 to 4	4	15%
Discussion Forum Units 5 to 8	4	10%
Programming Assignments	8	40%
Graded Quizzes	2	20%
Final Exam	1	15%
Total		100%

Grading Scale

This course will follow the standard 100-point grading scale defined by the University of the People, as indicated below:

Grading Scale

Letter Grade	Grade Scale	Grade Points
A+	98 - 100	4.00
A	93 - 97	4.00
A-	90 - 92	3.67
B+	88 - 89	3.33
B	83 - 87	3.00
B-	80 - 82	2.67

C+	78 - 79	2.33
C	73 - 77	2.00
C-	70 - 72	1.67
D+	68 - 69	1.33
D	63 - 67	1.00
D-	60 - 62	0.67
F	Under 60	0.00

Grade Appeal

If you believe that the final grade you received for a course is erroneous, unjust, or unfair, please contact your course instructor. This must be done within seven days of the posted final grade. For more information on this topic, please review the Grade Appeal Procedure in the University Catalog.

Participation

Non-participation is characterized by lack of any assignment submissions, inadequate contributions to the Discussion Forums, and/or lack of peer feedback to Discussion/Written Assignments. Also, please note the following important points about course participation:

- Assignments must be submitted on or before the specified deadline. A course timeline is provided in the course schedule, and the instructor will specify deadlines for each assignment.
- Any student showing non-participation for two weeks (consecutive or non-consecutive) is likely to automatically fail the course.
- Occasionally there may be a legitimate reason for submitting an assignment late. Most of the time, late assignments will not be accepted and there will be no make-up assignments.
- All students are obligated to inform their instructor in advance of any known absences which may result in their non-participation.

Academic Honesty and Integrity

When you submit any work that requires research and writing, it is essential to cite and reference all source material. Failure to properly acknowledge your sources is known as "plagiarism" – which is effectively passing off an individual's words or ideas as your own. University of the People adheres to a strict policy of academic honesty and integrity. Failure to comply with these guidelines may result in sanctions by the University, including dismissal from the University or course failure. For more information on this topic, please review the Academic Integrity Policy in the University Catalog.

Any materials cited in this course should be referenced using the style guidelines established by the American Psychological Association (APA). The APA format is widely used in colleges and universities across the world and is one of several style and citation formats required for publication in professional and academic journals. Refer to the [UoPeople's APA Tutorials in the LRC](#) for help with APA citations.

Code of Conduct

University of the People expects that students conduct themselves in a respectful, collaborative, and honest manner at all times. Harassment, threatening behavior, or deliberate embarrassment of others will not be permitted. Any conduct that interferes with the quality of the educational experience is not allowed and may result in disciplinary action, such as course failure, probation, suspension, or dismissal. For more information on this topic, please review the Code of Conduct Policy in the University Catalog.

Course Overview

CS1101 is the first programming course encountered in the Computer Science program at the University of the People. Although this course does not have the technical difficulty that will be encountered in later computer science courses, it does introduce concepts that may be very new to many students so it will require significant commitment and focus. It is imperative that you have mastered the ideas, concepts, and skills that are introduced in this course as later courses will assume that you have proficiency in these areas. As such do not just get by in this course. Make sure that you understand ALL of the concepts and can complete ALL of the assignments. If you are struggling with any idea, concept, or project, reach out for help to your peer and your instructor EARLY by posting in the course forum.

This course, CS1101 is an introductory course to the computer science program. For many students, this course will represent your first formalized exposure to the computer science discipline and field. The recommended readings provide an excellent history of the development of computer technology, computers, programming languages and the field of computer science in general. The recommended readings trace the development of modern computer technology from its earliest beginnings, through the personal computer and internet revolutions through to the recent history of the field. These readings will provide you with a good understanding of the key innovators of the field as well as their innovations providing a foundation for your further studies in the computer science program.

Finally selected units throughout this course have optional video lectures. These video lectures are not required but can be valuable to those students who have the ability to view streaming video as they present the same material covered in the reading assignment but in the form of a video/audio lecture that demonstrates implementing the concepts from the reading assignment. For those students who have access to sufficient computing resources and network bandwidth, these video lectures are highly recommended.
